SMILLA

The convenient seating aid for everyday use

SMILLA – The convenient seating aid for everyday use

- The new SMILLA has been completely redeveloped and is also available in both sizes as a NURSERY version.
- Height adjustment is progressive and done in seconds thanks to the integrated aluminium profile in the frame.
- The chair grows with the child thanks to the adjustable seat depth, back height and lower leg length.
- SMILLA integrates itself perfectly in your home environment because it is not just the perfect companion in terms of active sitting at the kitchen table.
- SMILLA stays mobile at home or in the nursery with the optionally available castors.
- The seat pads are available in many modern colours and can, just like the back support, be individually adjusted by specialist retailers.
- In order to meet the individual needs of the user even better, the angle of the seat and foot plate can be adjusted.
- The plug-in therapy table can be adjusted in height through the arm rests. This is also available with a rim as an option.

In order to meet the individual needs of the user even better, the angle of the seat and foot plate can now be adjusted

SMILLA can be quickly, simply and progressively adjusted in height using the aluminium profile integrated in the frame

The head rest can be adjusted in height

Abduction wedge

Alongside the previous sizes, a particularly low NURSERY version is now available

The plug-in therapy tables can be adjusted in height through the arm rests and are available with and without edge
